Abstract **Background** The use of a single, non-validated, questionnaire to assess the prevalence of mental health problems in the general population is likely to be unreliable. **Methods** The prevalence of mental health problems in the general population was assessed using a validated questionnaire, the General Health and Well-being Questionnaire (GHWBQ), and a single, non-validated, questionnaire, the General Health and Well-being Questionnaire (GHWBQ). The prevalence of mental health problems was assessed using the GHWBQ and the GHWBQ. The prevalence of mental health problems was assessed using the GHWBQ and the GHWBQ. **Results** The prevalence of mental health problems was assessed using the GHWBQ and the GHWBQ. The prevalence of mental health problems was assessed using the GHWBQ and the GHWBQ. **Conclusions** The prevalence of mental health problems was assessed using the GHWBQ and the GHWBQ. The prevalence of mental health problems was assessed using the GHWBQ and the GHWBQ. **Keywords** Mental health, Prevalence, General population, Questionnaire, GHWBQ.
